

**TRELLIDOR**  <sup>TM</sup>  
FIXED SECURITY

## TRELLIDOR FIXED SECURITY

Trellidor Fixed Security is a range of non-retractable galvanised steel security barriers. They are engineered to help protect windows, open balconies, glassed walls and glassed-in stairways from break-ins by unwanted intruders. We offer a choice of designs, some of which match Trellidor Retractable Security gates, so there is no mismatching of barrier styles.

Our fixed security barriers can be custom-manufactured to fit almost any sized opening, from large to very small. They can be installed internally or externally, face-on or in the reveal. All Trellidor Fixed Security options are suitable for both home and commercial applications.

Trellidor Fixed Security barriers are manufactured at our ISO audited factory and are SABS approved.

Trellidor Fixed Security barriers help protect windows from unwanted intrusion.

## PRODUCT RANGE

Trellidor Fixed Security barriers are available in a range of designs to suit all security risk profiles, from low to extremely high. The product choice includes:

### • Trellidor Trojan, Plus & Standard

These fully framed security barriers match Trellidor Retractable Security, our famous trellis-style security gates. The three designs look similar to the untrained eye, but differ in the way they are strengthened to resist attack. The choice of product will depend on the level of security risk of their installation location. Trellidor Trojan is recommended for extremely high risk security situations; Trellidor Plus for very high risk security situations; and Trellidor Standard for high risk security situations. Your Trellidor Consultant will advise you on the most suitable options after assessing the site.

Our fixed security barriers can be designed to fit any size window.

### • Trellidor Burglar Guard

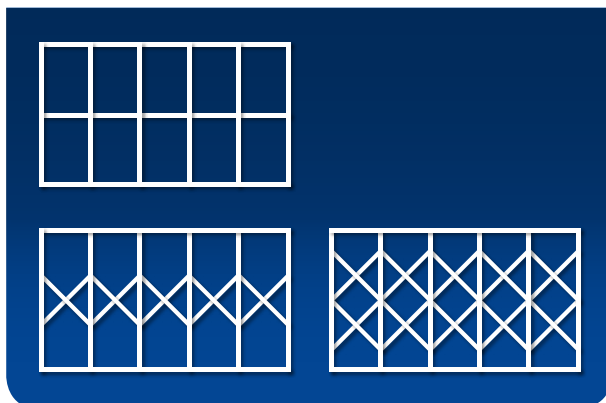

These burglar guards are economically priced as we appreciate that most homes have a large number of windows to secure. They are semi-framed and custom manufactured from electro-galvanised steel, suitable for low to high risk security applications. They're fixed into the wall or window using Trellidor's tamper-resistant coach screws. Trellidor Burglar Guards are manufactured from attractive oval-shaped uprights with a strengthening bar, protected by a fixing plate to help ward off an assault. They are easy to clean and let in more light than most other burglar guards. Trellidor Burglar Guards are available in three different attractive designs, including:

- Uprights with a horizontal strengthening bar
- Uprights with a single trellis pattern
- Uprights with a double trellis pattern, which matches Trellidor Retractable Security gates

All designs are available in 3 standard and 3 non-standard powder coated colours to match decor and finishings. They carry a warranty of 3 years inland and 1 year at the coast.

Trellidor Burglar Guard design with uprights and horizontal strengthening bars. These can be matched to window frames making them less obtrusive.

Trellidor Burglar Guard single trellis design for a less cluttered look.

### • Trellidor Cottage Guard

This is Trellidor's premium quality, fully framed burglar guard. They are custom measured and made to either match existing cottage pane windows or create a cottage pane effect. Trellidor Cottage Guard units are manufactured from a combination of aluminium rectangular tubing with a reinforced steel bar through the centre to increase their ability to fend off an attack. They require no welding and are bolted into the substrate of the window with coach screws to help resist break-ins. There are very few products on the market to challenge the strength of these burglar guards. Ask your Trellidor consultant for more information on this product.

Trellidor Cottage Guard can match or mimic cottage pane windows.

## INCREASED PROTECTION AGAINST CORROSION

Corrosion is a real threat to security as it weakens security barriers. If properly maintained Trellidor's range of fixed barriers carry a warranty in terms of quality, defective workmanship, materials and corrosion resistance, even in coastal regions. We're able to do this because:

- Trellidor's powder coating plant is state-of-the-art and includes a pre-treatment corrosion and UV resistant process
- Certain profiles are roll-formed into unique u-channels, enabling us to coat all surfaces against corrosion
- A number of our components are manufactured from glass-filled Nylon 6, so there is no risk of rust as with steel rollers on a steel track

With the correct care our security barriers will help keep corrosion at bay and deter criminals. Ask your Trellidor Consultant about our recommended Trellidor Lubricant Spray and suggested maintenance regime to ensure the validity of the full warranty.

## MONTHLY PAYMENT PLAN

We're all aware of the need to secure our homes against crime. Unfortunately lack of finances often means we have to compromise, securing only selected areas or using inferior products, leaving us vulnerable to break-ins. With the help of finance originators **Finconnect** you can apply for and structure a finance plan to make paying for your high-quality Trellidor security barriers quick, easy and affordable. You'll be able to help secure your entire home immediately, leaving no defenceless areas for robbers to exploit. You choose your own investment amount and the most manageable repayment terms, extending your payments over a period that suits you.

*As a conscientious consumer please remember that given enough time and the right tools, all security barriers can be breached no matter how well they're constructed. As a responsible manufacturer, however, we endeavour to design, engineer and install our products to give our customers the best possible security barriers the technology at the time allows.*
