

# New **portable barrier** from Trellidor

**T**rellidor has launched Access Guard, a new portable trellis-style barrier on wheels designed to control the movement of people or prevent access to designated areas. "This is a multi-use product," said brand manager Charlene Botha, "because it requires no fixed installation, can quickly be wheeled from one location to another and can be expanded or contracted to fit the space."

Access Guard is ideal for limiting access to the public when doors have to be kept open, for example in factories where the roller shutters are kept open for the day. Warehouses, retail outlets, airport terminals and the transport industry have use for these portable barriers to prevent access to restricted areas or to guide people into queues.
